

New Technology in IT Application Development

1. Design, build and run your app

The collision occurs when the ball hits the wall. You can add effects to highlight the collision. For example, when the ball collides with the wall, the wall color changes and displays text, Ouch!, on the screen. On the other hand, when the ball is back to rolling, the wall color changes to the original color and displays text, Keep Rolling..., on the screen.

2. Design and implement a robot is chasing a character as the images

The character can be controlled by keys: W,A,S,D and left, right, up down arrows
